

BRIEFS

BACKGROUND AND SUMMARY OF THE INVENTION

5 The present invention relates to underwear and, more particularly, to a pair of briefs for man, which fits the curvature of the male's external genital organs, giving comfortable wear.

Figure 1 shows a pair of briefs **5** for man according to the prior art.
10 According to this design, the pair of briefs **5** is not elastic. When put on the user's body, it does not expand and contract following the movement of the user's body. Therefore, this design of briefs is not comfortable in use. Figure 2 shows another structure of briefs **6** for man according to the prior art. According to this design, the pair of briefs **6** comprises a briefs body **62** made of elastic fabric, and a waistband **61** provided around the top of the briefs body **62**. This design of briefs is still not comfortable in wear because the waistband **61** and the briefs body **62** have a different elastic ratio.
15

The present invention has been accomplished to provide a pair of
20 briefs, which eliminates the drawbacks of the conventional briefs. It is one object of the present invention to provide a pair of briefs for man, which gives comfortable wear. It is another object of the present invention to provide a pair of briefs for man, which has means to receive and support the user's external genital organs comfortably.

According to one aspect of the present invention, the pair of briefs is comprised of a base panel, a front outer panel, a front inner panel, and a waistband. The front outer panel has a seam smoothly curved and vertically extended between the top and bottom sides on the middle and a convex portion 5 formed around a middle area of the seam. The front inner panel has a first seam smoothly curved and vertically downwardly extended from the midpoint of the top side, a second seam smoothly curved and vertically upwardly extended from the midpoint of the bottom side in line with said first seam, and a convex portion formed around the middle part between the first seam and the second 10 seam corresponding to the convex portion of the front outer panel for accommodating the user's external genial organs comfortably. According to another aspect of the present invention, the waistband, the base panel, the front outer panel, and the front inner panel have same elastic ratio.

DETAILED DESCRIPTION OF THE INVENTION

10

Referring to Figures 3~5, a pair of briefs in accordance with the present invention comprising a base panel 1, a front inner panel 2 fastened to the base panel 1 at the front side, a front outer panel (fly) 3 fastened to the base panel 1 in front of the front inner panel 2, and a waistband 4 fastened to the base panel 1, the front inner panel 2 and the front outer panel 3 around the top. The base panel 1, the front inner panel 2, and the front outer panel 3 are made of elastic fabric, for example, spandex. The overlapped area of the front inner panel 2 and the front outer panel 3 is sufficient to cover the external genital organs of a man.

15
20

The main features of the present invention are outlined hereinafter. The base panel 1, the front inner panel 2, the front outer panel 3, and the waistband 4 have the same elastic ratio. The front outer panel 3 has a seam 31 vertically extended and smoothly curved on the middle, thereby forming a convex portion 25 32 around the middle area of the front outer panel 3. The front inner panel 2 has

a first seam 21 smoothly curved and vertically downwardly extended from the midpoint of the top side, a second seam 23 smoothly curved and vertically upwardly extended from the midpoint of the bottom side. The first seam 21 and the second seam 23 are spaced from each other at a distance and aligned in a
5 line, thereby causing a convex portion 22 formed around the middle area of the front inner panel 2. When the front inner panel 2 and the front outer panel 3 attached together and stitched to the base panel 1 and the waistband 4, the convex portion 32 of the front outer panel 3 is suspended in front of the convex portion 22 of the front inner panel 2. When the briefs put worn on the user's
10 body, the convex portions 22 and 32 receive and support the user's penis comfortably. Because the convex portion 22 is seamless and because the base panel 1, front inner panel 2, front outer panel 3, and waistband 4 of the briefs have the same elastic ratio, wearing the briefs is comfortable.

15 Figure 6 shows an alternate form of the briefs. According to this alternate form, two thigh bands 7 and 8 are bilaterally fastened to the base panel 1, the front inner panel 2, and the front outer panel 3, forming two leg holes for the legs. The thigh bands 7 and 8 have the same elastic ratio like the base panel 1, the front inner panel 2, the front outer panel 3, and the waistband 4.

20

Although particular embodiments of the invention have been described in detail for purposes of illustration, various modifications and enhancements may be made without departing from the spirit and scope of the invention. Accordingly, the invention is not to be limited except as by the
25 appended claims.
